

PROJECT DEVELOPMENT PHASE

Metro Ticket Generating System in ServiceNow

Functional & Performance Testing • UAT • Template Applicability

Date	21 September 2026
Roll Number	238W1A4259
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

The Development Phase folder includes templates aimed mainly at model-based projects. Since this is a ServiceNow workflow build rather than an AI, ML, BI, Salesforce, or Tableau solution, the templates that apply have been adapted for ServiceNow functional and performance testing, and the ones that don't apply are marked accordingly. The scope tested is the Service Catalog booking flow, fare logic, payment options, and the QR ticket widget — there is no separate ticket database, no Flow Designer automation, and no Requested Item record used or checked as part of this project.

1. ServiceNow Functional & Performance Testing

Test ID	Scenario	Test Steps	Expected Result	Actual Result	Result
FT-01	Catalog item access	Open the Service Portal and go to Book A Metro Ticket.	The catalog form loads without issue.	Confirmed during the walkthrough.	PASS
FT-02	Station selection	Pick values for Starting From and Going To.	Station reference fields accept a selection.	Confirmed during the walkthrough.	PASS
FT-03	Same-station check	Pick the same station on both fields.	The system blocks the invalid route.	Handled in the Client Script.	PASS
FT-04	One-way fare	Choose a valid route, single trip, and passenger count.	The one-way amount is worked out correctly.	Confirmed while testing.	PASS
FT-05	Round-trip fare	Choose a valid route, return trip, and passenger count.	The return fare comes out correctly.	Confirmed while testing.	PASS
FT-06	“Others” payment field	Set Mode of Payment to Others.	The Enter Payment Mode field appears.	Confirmed successfully.	PASS
FT-07	QR ticket	Complete a booking through the QR step.	The QR widget shows a QR code.	Built and shown in the demo.	PASS
PT-01	Form responsiveness	Change the station, trip type, or passenger fields.	Fare fields refresh instantly without server lag.	Handled via client-side logic.	PASS
PT-02	QR generation speed	Trigger QR creation from the booking flow.	The QR image displays without noticeable delay.	Confirmed while testing.	PASS

2. User Acceptance Testing (UAT)

Project Overview

Project Name	Metro Ticket Generating System in ServiceNow
Project Description	A ServiceNow Service Catalog application for digital metro ticket booking, automatic fare working-out, and QR ticket display for each request.
Project Version	V1.0
Testing Period	End-of-project testing window
Testing Environment	ServiceNow development instance / Service Portal

Testing Scope

- Booking through the catalog item
- Choosing and validating stations
- Working out one-way and return fares
- Selecting passenger counts
- Handling payment mode choices
- Creating QR tickets
- Controlling access to custom station data

UAT Test Cases

Test ID	Scenario	Test Steps	Expected Result	Actual Result	Result
TC-001	Book a one-way trip	Choose Ameerpet → Kukatpally, Single, 2 travellers; submit.	Correct one-way fare is shown and the booking completes.	Confirmed in project testing.	PASS
TC-002	Book a round trip	Choose Ameerpet → LB Nagar, Return, 2 travellers.	Return fare fills in and the booking completes.	Confirmed in project testing.	PASS
TC-003	Payment handling	Choose Others and type Cash.	Enter Payment Mode shows up and is saved.	Confirmed in project testing.	PASS
TC-004	QR display	Trigger QR creation from the booking flow.	The QR widget appears.	Shown during the project walkthrough.	PASS
TC-005	Duplicate station check	Choose the same station for source and destination.	A validation warning is displayed.	Handled in the Client Script.	PASS

Bug Tracking

Bug ID	Description	Steps to Reproduce	Severity	Status	Feedback
BG-001	Passengers had to click Checkout twice to finish booking after the QR code appeared.	Complete a booking and observe the Checkout step.	Low	Known / Design Choice	The first Checkout click opens the QR preview; a second click confirms and submits the request.
BG-002	The QR Generated flag could stay false if the QR step wasn't completed.	Submit a test case without finishing the QR step.	Low	Known / Test Condition	Make sure QR generation runs during the final walkthrough.

3. Supplied Model Performance Templates — Applicability

Supplied Template	Applicability to this Project	Documentation Treatment
Artificial Intelligence	Doesn't apply — this isn't an AI model build.	N/A — no training or validation accuracy to report.
Machine Learning	Doesn't apply — no ML model is involved.	N/A — no classification or regression metrics.
GenAI Functional & Performance Testing	Doesn't apply — not a GenAI application.	N/A — adapted functional tests are shown in Section 1 instead.
Power BI	No Power BI dashboard exists in this build.	N/A.
Tableau	No Tableau dashboard exists in this build.	N/A.
Salesforce	Built on ServiceNow, not Salesforce.	N/A.
User Acceptance Testing FSD	Applies to this ServiceNow application.	Fully completed in Section 2 above.

Development Outcome

The finished system covers the required ServiceNow build: station master data, the Book A Metro Ticket catalog item, the fare client script, the payment UI policy, the QR-generation client script and widget, and the default ACLs created with the custom station table. The project scope does not include a separate ticket database, Flow Designer automation, or a Requested Item record; the booking flow ends with the QR ticket display on the confirmation screen.
